

**Teacher:** Jessica Novillo Argudo  
**Unit Plan:** Ethics in Computer Science  
**Lesson:** Bias in algorithms  
**Grade:** 12<sup>th</sup> Grade  
**Date:** Spring 2023

<b>Overall Objectives of Lesson:</b> <ul style="list-style-type: none"><li>• Students will learn the definition of algorithm and algorithmic bias.</li><li>• Students will explore examples of algorithmic bias in society.</li><li>• Students will identify the bias in a simple algorithm developed in Python.</li><li>• Students will modify a Python algorithm to eliminate the existing bias.</li></ul>	
<b>Standards</b>  <b>9-12.IC.3:</b> Debate issues of ethics related to real world computing technologies.  <b>9-12.CT.7:</b> Design or remix a program that utilizes a data structure to maintain changes to related pieces of data.  <b>Content-specific vocabulary:</b> Algorithm Algorithmic bias	<b>Assessments</b> <ol style="list-style-type: none"><li>1. Participation</li><li>2. Observation of the students' programming skills</li><li>3. Exit Slip</li></ol>

### Materials/Resources

Projector  
Computers  
Slides  
Exit Slip  
Programming language Python

## Sequence of Lesson Plan

<b>Time Allotment</b> 5 minutes	<b>Anticipatory Set - Warm-up</b>  The teacher asks students: What is an algorithm? Students share their ideas.  The teacher defines "algorithm" and gives examples.  <b>Algorithm:</b> An algorithm is a set of instructions that a computer follows.  The teacher asks students to go to Google Images <a href="https://images.google.com/">https://images.google.com/</a> and search for "professor".  The teacher asks the students to make groups of 2 or 3 and answer the following questions: <ul style="list-style-type: none"><li>- Who do you see? [Actors, stereotypes, white males mostly, no diversity]</li><li>- Who did you expect to see? Who is missing? [More women, more people of color, more diversity, real-life professors]</li><li>- How does the information provided by these images influence you? [Professors all dress alike in suits and ties. Professors are easily identified by how they dress. Reinforces stereotypes]</li><li>- Does this tell us anything about how the population is represented or misrepresented? [Population is misrepresented; most professors do not dress this way. There is more diversity in real life]</li></ul> The teacher asks students to share their responses.
18 minutes	<b>Lesson</b>  <b>Note:</b> The teacher uses slides for this lesson.  The teacher defines bias.  <b>Bias:</b> Prejudice in favor of or against one thing, person, or group compared with another, usually in a way considered to be unfair.  The teacher explains the problems with algorithms and defines algorithmic bias.  <b>Algorithmic bias:</b> Create outcomes based on preference for someone or a group of people over another.  The teacher explains the sources for bias in algorithms.  The teacher provides examples of bias in algorithms: Amazon's recruiting algorithm biased against women, Mortgage algorithms and Predictive policing algorithm.  The teacher asks the students: Have you seen any algorithm bias in the applications you

	use every day? [Facebook, music recommendation algorithms, healthcare systems]
15 minutes	<p><b>Practice</b></p> <p>The teacher introduces the practice exercise.</p> <p>The teacher gives a python script to the students and asks them to identify the bias in the algorithm.</p> <p>The teacher asks the students why there is bias in the algorithm and how can they make it fair? [Yes, players are selected based on donation and not ability. Selecting players based on their overall rating would be fair]</p> <p>The teacher gives the directions to modify the python script to make the algorithm fair.</p> <p>Students work in pairs on the assignment.</p>
2 minutes	<p><b>Closing</b></p> <p>Students complete the Exit-Slip</p>
